Data Analyst for Startups & Remote Teams | I Turn Spreadsheet Chaos into Power BI Dashboards & Python-Automated Reports | SQL · ETL · Business Intelligence
Lahore, Punjab, Pakistan

Summary

Messy spreadsheets cost teams time and bad decisions. I fix that. I'm a Data Analyst helping small businesses and startups turn scattered data into dashboards and reports they actually use. Over the past year, I've built end-to-end workflows — cleaning and structuring data with Python (Pandas, NumPy) and SQL, then designing Power BI dashboards that surface the metrics leadership cares about. Recent impact: — Automated a recurring reporting process, cutting manual work by an estimated [X hours/week] — Built Power BI dashboards used by [team/department] to track [specific metric, e.g. sales pipeline, ops KPIs] — Streamlined data cleaning workflows across datasets of [approximate size, e.g. 10K+ rows] If you're a founder or team lead drowning in spreadsheets and need someone to build the reporting infrastructure you don't have time for — let's talk. Tools: Python · SQL · Power BI · Excel (Advanced) · ETL · Data Visualization · Business Intelligence

Experience

Xynova.ai
Data Analyst
January 2025 - Present (1 year 7 months)
Lahore

Data Expert at xynova.ai, specializing in business intelligence, data pipelining, and predictive analysis. Translates raw data into high-impact visual narratives to support scalable, cutting-edge IT and AI solutions.

Education

Virtual University of Pakistan
MCS, Computer Science · (September 2021 - December 2025)
